INTRODUCTION

For more than ten years FEEBE has been developing top quality products for super yachts. Passerelles, deck cranes, boarding ladders, overhead cranes and unique custom made solutions. You will never hear the phrase 'no, that's not possible' at FEEBE's headquarters. We provide the best possible solution. In the highest standards. Always.

Our Luxury product line includes products with the best possible finish, the Xplorer series includes products with an emphasis on robustness and in the Design series you will find the specials, designed by Dutch designer Bernd Weel.

The passerelles, boarding ladders, deck cranes, overhead cranes and specials are all products that show a high degree of Dutch craftsmanship. A team of professionals is involved in the design, hydraulics, construction, production, finishing, installation, delivery and commissioning, service and after-sales. With the best possible end result in mind. On all levels.

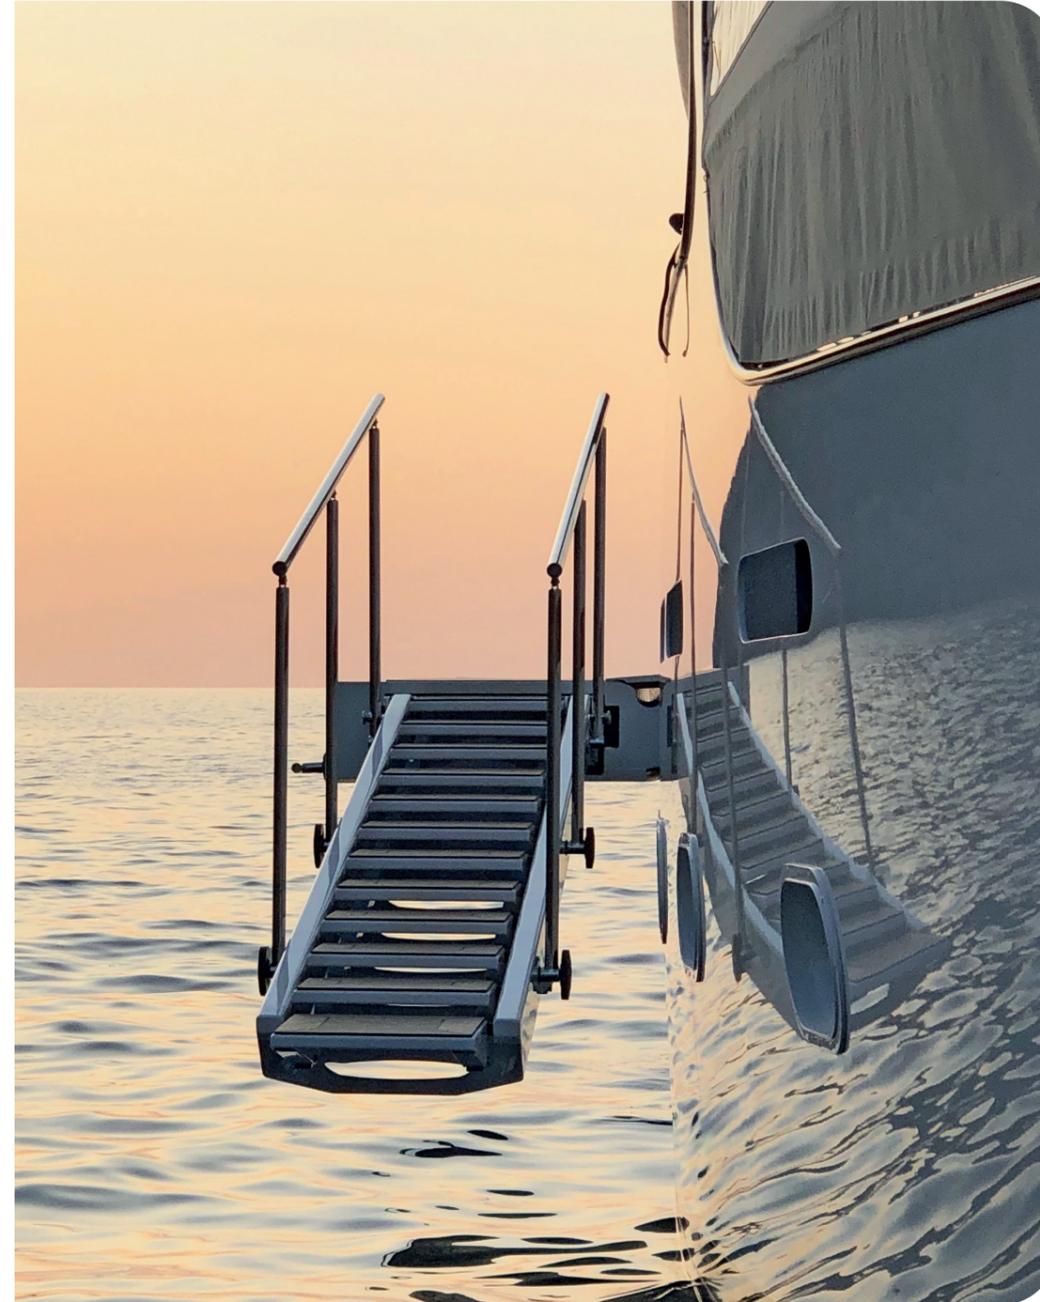

WHY FEEBE?

FEEBE is a Dutch company. Our products are designed in The Netherlands and built in The Netherlands. In the top quality you expect from the Dutch shipbuilding industry. We specialize in custom-built hydraulic and electrical products for superyachts. FEEBE has over 20 years of experience. Our dedicated and passionate team is highly motivated to design and develop the absolute best products for you and your specific situation. Throughout the entire process, from initial contact to final delivery, we keep an open mind and brainstorm proactively along with you. Communication with us is quick, easy and hassle-free. We always have time for you. Our lines of communication are short: you have a single point of contact for your project, who keeps everything on track.

Customer-focused communication

“My first stop would be FEEBE without question and without any doubt.”

Barry McCrindle, Project Manager and owners representative.

“FEEBE is my first choice supplier for deck equipment.”

Arjan Zutphen, AZ Scheepstechniek.

“FEEBE undoubtedly hunts for the best possible solution for complex challenges in the yachting industry.”

René Couperus, Project manager, marine engineer en project development at Icon Yachts.

Luxury

Luxury

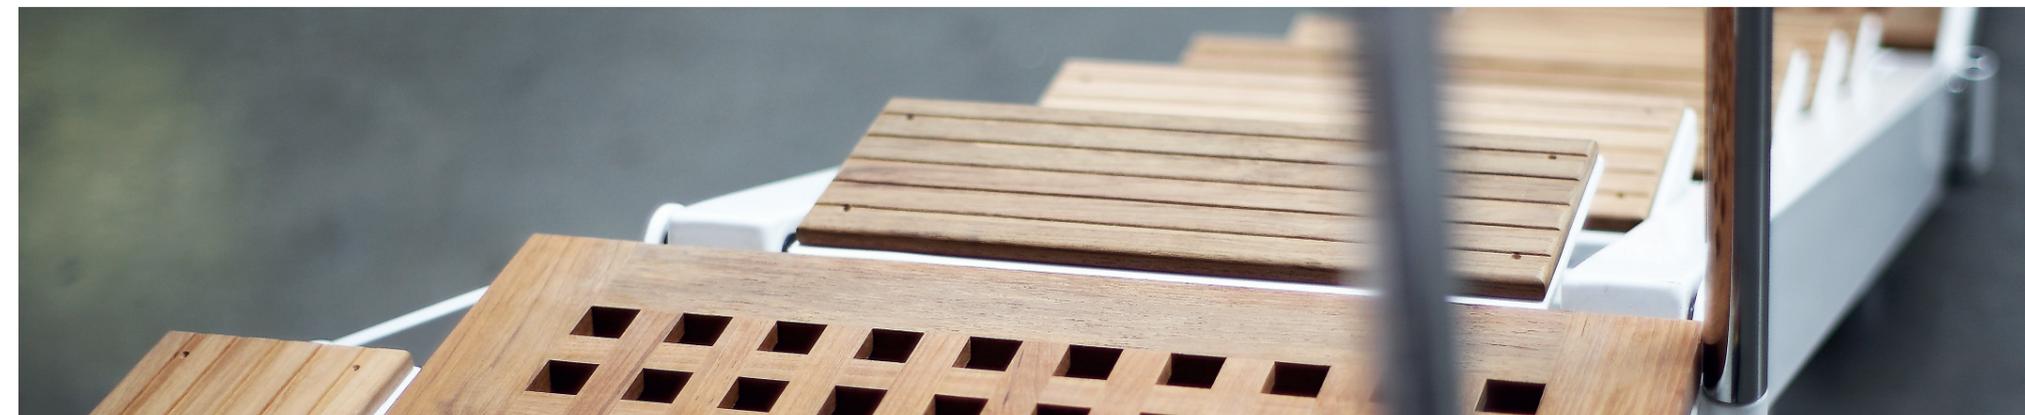

FEEBE Luxury is about achieving the pinnacle of quality and rock-solid reliability, in both finish and function, with a keen eye for detail. Just as you would expect from a Dutch product. The Luxury series by FEEBE includes passerelles, boarding ladders, deck cranes and overhead cranes.

XPLORER

Xplorer

FEEBE Xplorer is all about reliable equipment of rugged and robust design. Products in the Xplorer series are custom-tailored to your specific application. The finish is matching charisma, with special attention to corrosion prevention. The product's appearance blends perfectly with the yacht.

Design

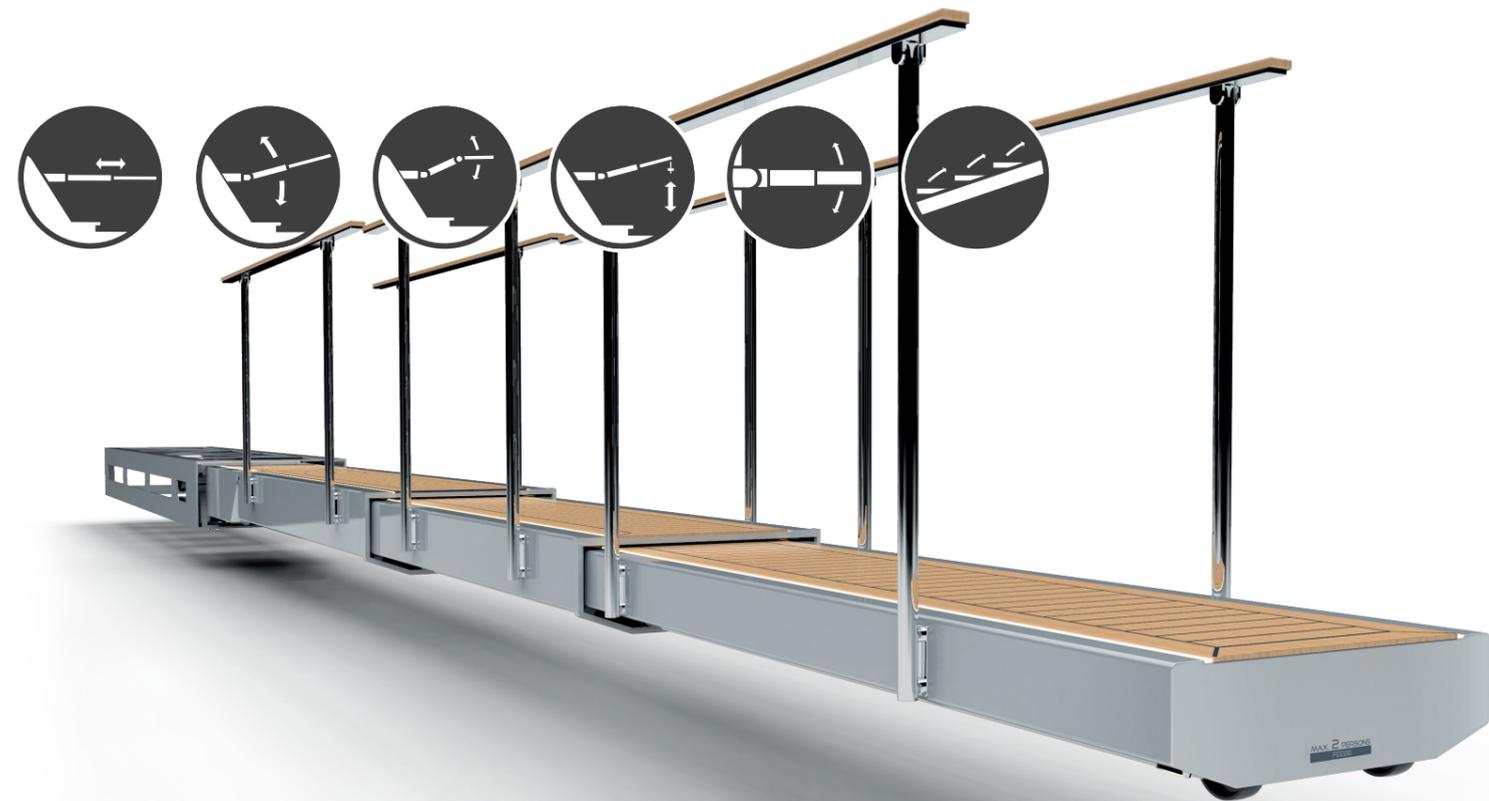

FEEBE Design is all about top-of-the-line, custom-tailored products in elegant designs. Completely developed according to the client's specific desires. With consultation and support from our designer, we design products with a stunning form and finish, meeting the functionality and reliability standards.

PASSERELLES

Our telescopic passerelles offer you safety and peace of mind when you step aboard your yacht. A real eye-catcher - the "front door" for you to extend a warm "welcome aboard" to your family and guests. Luxury passerelles by FEEBE are stored in an aluminum box concealed in the yacht at a location of your choosing. This could be at the stern of the yacht, on the port or starboard side. The hydraulically powered passerelle can be raised and lowered, and also made pivotable for optimal connection to docks and jetties. This lets you moor in any situation.

Max. reach 12 m.
Swivel max. 80 deg. PS
 80 deg. SB
Up/down max. 20 deg. up
 20 deg. down

DECK CRANES

A deck crane is indispensable on a yacht, for essential jobs such as loading materials, jet skis, dinghies and provisions aboard. FEEBE makes its deck cranes in both telescopic and folding designs. Articulated boom designs are also possible. The range of the deck crane is entirely dependent on your needs and its location. As an option, the crane can be fitted with a 230/400 VAC or 24 VDC power unit, possibly integrated into the crane base. FEEBE deck cranes feature 360° hydraulic rotation for handling comfort in all situations and at all times. Safety always comes first..., the crew can use a remote control to operate the crane from the safest possible location.

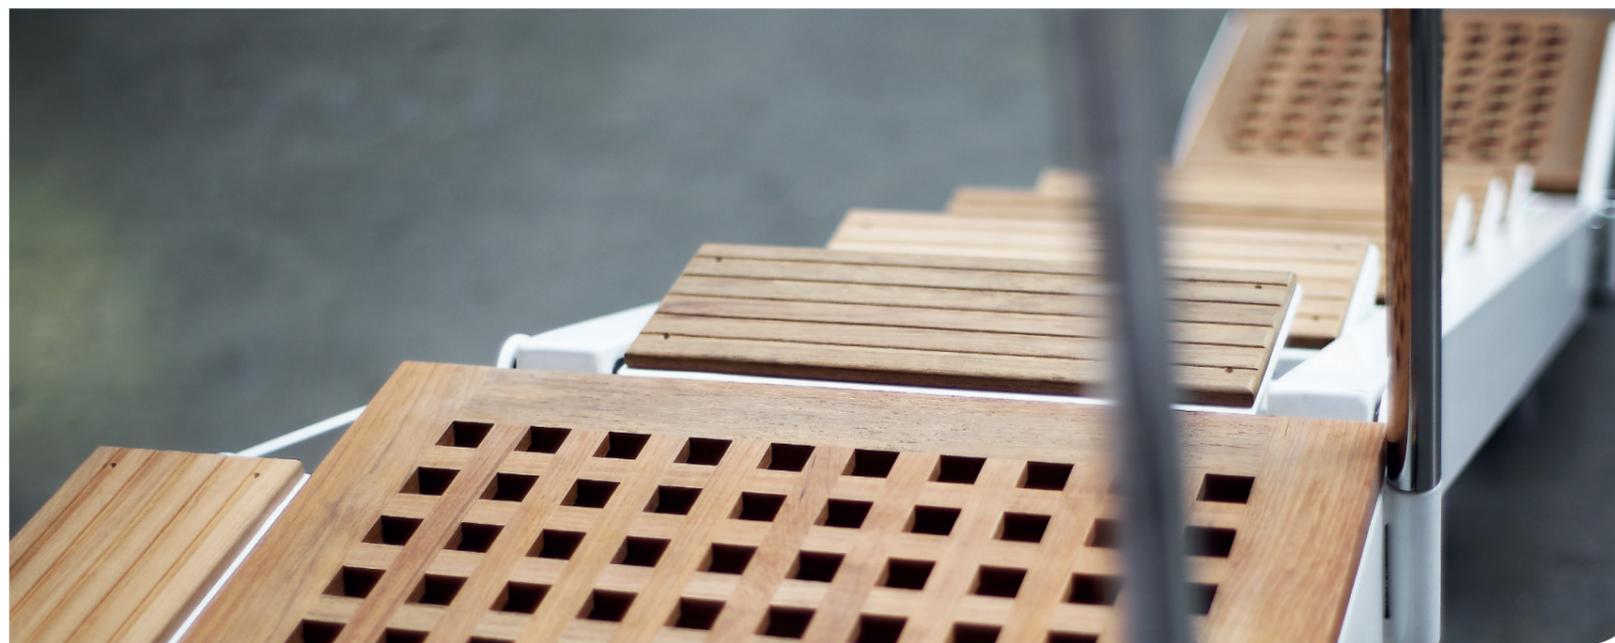

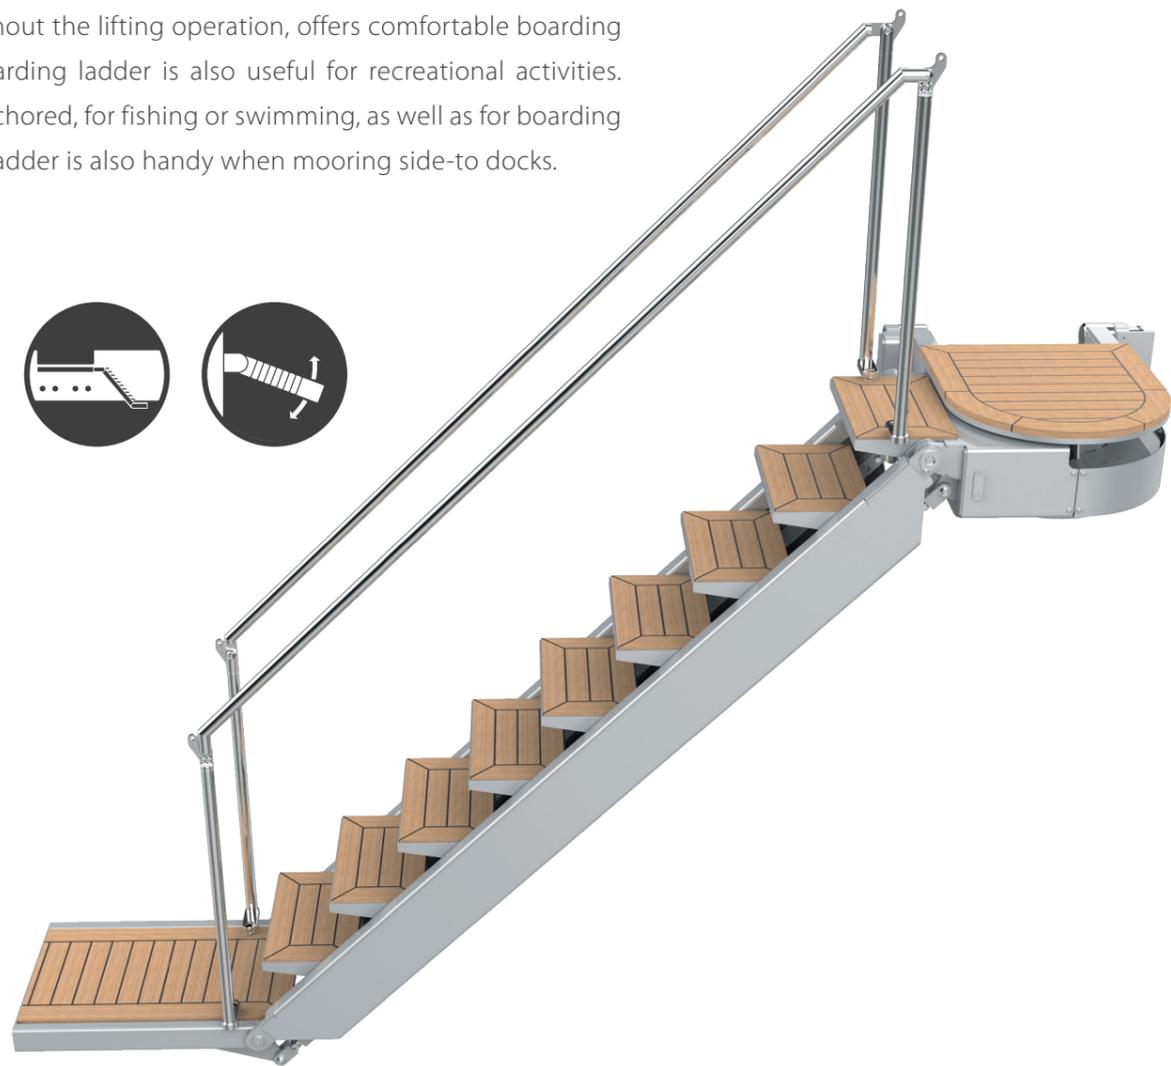

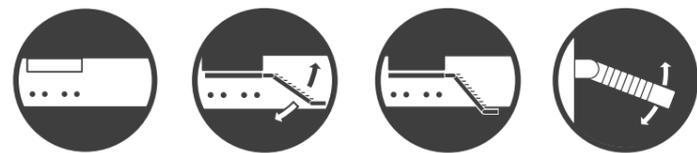

Max. reach 8 m.
Max. SWL 6.000 kg.

BOARDING LADDERS

To bridge the gap between the dock or jetty and the deck of your yacht, FEEBE has developed a special boarding ladder. The boarding ladder is built into the yacht's bulwark or below deck. This hydraulic folding ladder, whose steps remain in horizontal position throughout the lifting operation, offers comfortable boarding and debarking. But the boarding ladder is also useful for recreational activities. Such as when the vessel is anchored, for fishing or swimming, as well as for boarding from a tender. The boarding ladder is also handy when mooring side-to docks.

Max. 20 steps
Rotation max. 180 deg.

OVERHEAD CRANES

An overhead crane is a highly functional hoisting solution aboard a yacht. The crane is an extendable/retractable crane with a boom that can pass through an opening in the hull of the yacht. The boom features an attached lifting point to which the tender and other items can be secured. FEEBE overhead cranes can be powered in two ways: with a hydraulic drive or with an electric drive. FEEBE custom-builds its overhead cranes. The design stage always focuses on the intended use and purpose of the crane.

Max. reach	5 m.
Single hook / double hook	Max. SWL 4.000 kg.

FEEBE DESIGN

FEEBE Design is all about top-of-the-line, custom-tailored products in elegant designs. Completely developed according to the client's specific desires. With consultation and support from our designer, we design products with a stunning form and finish, meeting the functionality and reliability standards of products in our Luxury series, but in the most breathtaking design possible, with zero compromise on function. This way, our technical equipment no longer has to be an obstacle: it can be incorporated into the contours of the yacht. In many cases, it is possible not only to deploy the equipment functionally, but also to have it contribute to the positive experience of guests onboard.

Design

WHO ARE WE?

We are a team of practical-minded people from Friesland (The Netherlands) with a passion for technology and a smooth finish. And, of course, a drive to help our clients in every way we can.

FEEBE develops and creates custom and standard equipment for mega yachts. We enjoy continuous customer satisfaction with and enthusiasm for our solutions, our service and our products.
